

Building a Snowboard Rail

Research Paper

I researched the flow state the many activities allowing your mind to achieve the flow state or more commonly known as being in the zone.

Fieldwork

For my project I will be measuring and cutting metal for the legs, body, and top pipe of the rail. Then I will be welding the legs and body together to create the base and then the top rail is screwed and welded to the base.

Final Product

My final product will be a finished snowboard rail that will stay at Yawgoo Valley.
