
Jayden Parry - Vintage Surfboard Restoration

- The goal of my project is to refurbish a vintage surfboard I have and make it usable again.
- My research paper focus is about how global warming is affecting the ocean and ecosystems that exist within it.
- My field work will consist of lots of practice with polyester resin, various tools and lots of glass work.
- The finished product is going to be a water tight and fully functional surfboard from the 1970's.
