

Working In A Mechanics Shop While Observing and Recording Progression

Jack Sullivan

For my senior project I will be working in a mechanics shop for an extended period of time, learning the basic knowledge and function of being a mechanic. I am doing this because I hope to go into mechanics and this is a great way to get into the field (of opportunity). My senior paper is focusing on Tesla, and how they have changed the automotive industry in many ways in another perspective of mechanics. I plan to create a video and powerpoint of what I have learned and how much I have progressed in the shop (work performance).
